

Discover the Charm of Tohoku in this Koriyama Cultural Tour

Sansoken Fukushima Renewable Energy Research Center (FREA) Tour

【What's in the Plan】

■ FREA was established to develop renewable energy and revitalize the region following the Great Tohoku Disaster and Fukushima Nuclear Power Plant Disaster. In the conference rooms and exhibition facilities of the Research Building, we will give a brief introduction about FREA. In addition, we will provide an opportunity to see the entire picture of the demonstration field and to see the latest technologies firsthand.

■ You can learn about and experience renewable energy sources of the future at FREA, such as geothermal energy, earth thermal energy, solar power, wind power, and hydrogen power.
